

## ENVIRONMENTAL PERFORMANCE COMMUNICATION

**Noise:** We maintain thorough control of our equipment and facilities, ensuring their optimal condition through periodic inspections and preventive maintenance.

**Control of atmospheric emissions:** We subject our vehicles to inspections of our combustion gases. (ITV). The results of the last year have been satisfactory.

**Discharge control:** Our business activity does not generate polluting discharges.

### Resource consumption

- **Electricity:** In 2023, our electricity consumption increased compared to 2022.
- **Diesel:** Consumption has increased by 12% due to the unique location of the facilities built in the last period.
- **Water:** Regarding water, we recorded an increase in consumption during 2023 compared to 2022. However, it is important to highlight that we do not generate process discharges.

**Waste management:** We maintain identified containers for the segregation of each type of waste. We conduct inspections to prevent improper mixing and overfilling:

- **Hazardous waste:** The volumes of hazardous waste generated, such as contaminated empty containers, aerosols, and absorbents, have remained at similar levels to previous years.
- **Non-hazardous waste:** In general, the amounts of non-hazardous waste generated, such as aluminum, PC, cardboard, and residual waste, have increased. This varies greatly depending on the type of work carried out each year.

**Assessment of compliance with legal requirements:** Through an internal process of identifying and analyzing legal requirements, we monitor our legal compliance.

At CUBRIMA, our commitment to sustainability and environmental protection is reflected in these achievements and our ongoing pursuit of improved environmental performance.
